

EDU 411 Capstone: Science Education

Pre-requisites: EDU 200, 202, 392, 393, or permission of instructor.

This is the culminating science education course for undergraduates who are pursuing secondary science teacher certification. Proper management of all aspects of the science classroom is the principal focus of this capstone course. Since it is taught in conjunction with Practicum, many course topics relate directly to the manner in which science programs are implemented in high schools. New topics include high-stakes testing and curriculum integration. Other areas such as assessment, inquiry, and instructional design that were introduced during earlier courses are explored in greater depth. (3 credits)
