Fall 2015

Situated on the eastern shore of the Taunton River, the proposed Fall River Ferry Terminal acts as a transportation hub and a new gateway to the city of Fall River. The development of the City Pier site with a ferry terminal is part of a greater renovation of the Fall River waterfront. The plans include a new MBTA train line and the extension of South Coast Bikeway. The terminal will accommodate both traditional vehicle ferries and high-speed passenger ferries servicing Block Island, Newport, and Cape Cod. The construction of the terminal is one step in the restoration of the city as a center of transportation, as it was in the time of the old Fall River Line.
